

Appln No. 10/651,428

Amdt date December 28, 2004

Reply to Office action of September 28, 2004

REMARKS/ARGUMENTS

Claims 1-11 will be pending in this application upon entry of the above amendments. Claims 1-4 have been amended. Claims 7-11 have been added. The amendments find full support in the original specification, claims, and drawings. No new matter has been added. In view of the above amendments and remarks that follow, reexamination, reconsideration, and an early indication of allowance of claims 1-11 are respectfully requested.

As an initial matter, the Examiner indicates that this application is a divisional of U.S. Patent Application No. 09/747,932. This application is actually a divisional of U.S. Application No. 09/747,392. A Preliminary Amendment was submitted on September 16, 2003, to indicate this correction. Entry of the Preliminary Amendment is respectfully requested.

The Examiner rejects claims 1-6 under 35 U.S.C. 102(e) as being anticipated by Goh. Applicant respectfully traverses this rejection.

Claim 1 has been amended to recite that "each recording mode" is "for recording a different set of data frames exchanged between the mobile set and a second device during a phone call." Claim 1 has been further amended to recite "recording a set of data frames identified by a selected recording mode."

Goh fails to teach or suggest these limitations. Although Goh discloses a portable telephone capable of recording voice data during a telephone conversation, the telephone in Goh only records one type of voice data, that is, voice data generated by the user of the portable phone. As such, Goh's portable telephone only has one recording mode. Goh's portable telephone

does not support "a plurality of recording modes, each recording mode for recording a different set of data frames exchanged between the mobile set and a second device during a phone call" as is required by claim 1. (Emphasis added). Accordingly, claim 1 is now in condition for allowance.

Claims 3 and 4 have now been amended to recite that the recorded conversations are "recorded conversations including data frames transmitted from the mobile set to a second device during a phone call, and data frames transmitted from the second device to the mobile set during the phone call." Goh again fails to teach or suggest this limitation. As discussed above, Goh only records and plays voice data generated by the user of the portable telephone. Nothing in Goh teaches or suggests playing recorded conversations that also include "data frames transmitted from the second device to the mobile set during the phone call" as is recited in claims 3 and 4. Accordingly, claims 3 and 4 are now in condition for allowance.

Claims 2, and 5-6 are also in condition for allowance because they depend on an allowable base claim, and for the additional limitations that they contain.

Claims 7-11 are new in this application. Claims 7-11 are also in condition for allowance because they depend on an allowable base claim, and for the additional limitations that they contain.
